Key Features:

Aquadose pro is the last dosing pump you will ever need. Powered by water pressure (min 1.5bar pressure), it gives consistent accurate dosing.

You have four inputs built into the unit that are selectable with the control knob. This allows you to have the ultimate in customisation.

Each port can be set to a specific chemistry and a specific dilution. This allows you to guarantee that your operators are getting exactly what they need without wasting chemistry or potentially creating an infection risk by not using enough.

The simple operation makes it easy for anyone to get the correct solution.

Certified to use with open water systems as the valve system again guarantees that it is impossible for chemicals to be introduced into the water supply.

This simple little unit is the ultimate system for dosing all your chemicals in one place.
